CELINE TANNOUS

CYBERSECURITY PROFESSIONAL // TRANSITIONING U.S. NAVY OFFICER |
AVAILABLE FOR CYBERSECURITY ROLES (EARLY 2027)

PROFILE

Cybersecurity professional and former U.S. Navy Cyber Officer with operational experience securing mission-critical networks in high-reliability environments. Proven ability to translate vulnerabilities and threat intelligence into actionable defensive controls and risk reduction outcomes.

EDUCATION

United States Naval Academy — Annapolis, MD

Bachelor of Science, Cyber Operations (Honors Program) — 2021

Graduated with Merit

CAE-CO Designated Program

EXPERIENCE

United States Navy — Surface Warfare Officer / Nuclear Officer (LT)
2021 – Present

Cyber Officer — USS HARPERS FERRY (LSD-49)

- Managed cybersecurity posture for operational shipboard networks supporting mission-critical systems.
- Conducted vulnerability identification aligned with DoD cybersecurity standards.
- Coordinated remediation and enforced security controls across networked systems.
- Implemented cybersecurity training to improve organizational security awareness.

Reactor Electrical Division Officer — USS CARL VINSON (CVN-70)

- Led 20-person technical division responsible for nuclear propulsion electrical systems.
- Managed fault isolation, redundancy, and casualty response in time-critical environments.
- Executed training programs increasing qualification rates and system reliability.

SECURITY PROJECTS

Detection Engineering Lab

- Engineered a virtualized enterprise lab using VMware with Active Directory, Windows endpoints, and Linux-based SIEM (Wazuh) to simulate real-world infrastructure.
- Validated custom Wazuh detections against Atomic Red Team attack simulations mapped to MITRE ATT&CK techniques including PowerShell abuse, persistence, and lateral movement.
- Diagnosed and resolved network-layer and service-level failures (DNS misconfiguration, VM network segmentation, agent enrollment issues) to restore full detection pipeline functionality.

LANGUAGES

English – Fluent

French – Conversational

Arabic – Conversational

AWS Cloud Security Automation Lab

- Built an AWS cloud security monitoring environment integrating CloudTrail, GuardDuty, SecurityHub, IAM, and EC2 to simulate enterprise cloud infrastructure and security operations.
- Automated security finding enrichment and reporting workflows using Python and AWS APIs, reducing manual analysis and improving investigation efficiency.
- Implemented and validated least-privilege IAM controls through misconfiguration testing, detection analysis, and remediation of identified security risks.

EARLY TECHNICAL EXPERIENCE

General Electric Aviation — Cyber Analyst Intern

- Performed indicator of compromise (IOC) research to support identification of malicious activity and emerging threats.
- Analyzed emails for indication of phishing, malware, or compromise, and escalated confirmed threats.

Johns Hopkins University Applied Physics Laboratory (JHUAPL) — Cyber / Research Intern

- Supported applied research projects related to cybersecurity and national security systems.
- Assisted with technical analysis, scripting, and documentation in a mission-focused research environment.
